

## Arnold MK1- the versatile lifting aid

Re the above lifter I have now trained this item out to a number of personnel in the West Midlands. What can I say about it?

Well it's an easy item for me to train guys on, it only takes a matter of minutes before someone can be classed as competent to use. It's simple but effective design means that it is rugged, but still remains versatile and easy to assemble and operate. It allows an operative to lift far more than he would be able to do on his own, by use of the fulcrum lifting method. It removes the risk of injuries that an operator might encounter when trying to lift both light weight lids and the more heavy cast iron lids which are located where ever we may work, No longer is a guy likely to get his fingers pinched or trapped when trying to manoeuvre a lid from its location. It removes the possibility of a back injury occurring through either incorrect posture or an operative trying to lift a load which is physically too heavy for 1 individual. It also removes the need for 2 guys to be available to lift some of the lids. This saves on time, effort and costs when lifting or handling a drain lid, BT cover or similar Gatling style cover.

Thanks
